SUMMARY

Results-driven Electronics and Computer Engineering (ECM) student maintaining a 7.6 CGPA, specializing in AI-driven IoT architectures and microcomputer systems. Proficient in Python, C++, foundational Linux Shell scripting, and hardware-software integration utilizing Raspberry Pi and ESP32. Experienced in Database Management Systems (DBMS), CMOS design basics (Cadence Virtuoso), and engineering LLM-powered applications and RAG pipelines. Seeking a challenging engineering role to leverage strong technical problem-solving, embedded systems knowledge, and software engineering capabilities to build scalable solutions.

EDUCATION

Bachelor of Technology (B.Tech) — Electronics and Computer Engineering *2024 – 2028*
REVA University, Bangalore *CGPA: 7.6 / 10.0*

Pre-University Course (PUC) — PCMB *2023 – 2024*
Vision PU College, Bangalore *Result: 88.5%*

Secondary School Leaving Certificate (SSLC) *2021 – 2022*
Excellent English Medium School, Vijayapur *Result: 91.2%*

TECHNICAL SKILLS

AI & LLMs: LangChain, RAG Pipelines, Prompt Engineering, Vector Databases (Pinecone, Chroma), Hugging Face
Programming & Systems: Python (Advanced), C, C++, MicroPython, SQL, Linux & Shell Scripting (Basics)
Core CS & VLSI: Database Management Systems (DBMS), CMOS Design (Cadence Virtuoso Basics), Object-Oriented Programming (OOP)
Hardware & Tools: Raspberry Pi, ESP32, Cadence, Git/GitHub, Docker, VS Code, Arduino IDE, DesignSpark PCB

PROJECTS

Pi-hole Network-Wide Ad Blocker — Raspberry Pi, DNS Sinkhole, Linux, Shell Scripting

- Engineered a network-level DNS sinkhole on Raspberry Pi to intercept and block ads, tracking telemetry, and malicious domains across 15+ connected local devices.
- Configured automated shell scripts and custom blocklists, reducing unwanted network bandwidth usage by 35% and accelerating page load speeds by 20%.
- Processed over 10,000 daily DNS requests with zero downtime, enhancing network privacy and security.

Smart Telemetry Dashboard — MicroPython, ESP32, MQTT

- Developed an IoT telemetry logging system utilizing the ESP32 dual-core processor to handle concurrent sensor data acquisition at 100+ samples/second.
- Deployed a centralized performance monitoring dashboard over MQTT protocol, achieving real-time wireless data transmission with under 50ms latency.

Component-Based E-Commerce Web Application — SQL, JavaScript, DBMS Architecture

- Architected a modular e-commerce application incorporating secure user authentication and dynamic transactional workflows.
- Designed and normalized relational SQL database schemas handling 500+ records, optimizing indexing to improve query retrieval efficiency by 30%.

CERTIFICATIONS

- **Generative AI Engineering with LLMs Specialization:** IBM & Coursera (Fine-Tuning, RAG, Transformers, LangChain)
- **Generative AI with LLMs:** DeepLearning.AI & AWS (LLM Lifecycle, Fine-Tuning, and RAG)
- **Natural Language Processing Specialization:** DeepLearning.AI (Attention Models, Transformers)
- **NVIDIA Deep Learning Institute:** Fundamentals of Deep Learning (GPU Acceleration)
